| Division | Department of Computing Technologies | No. of Positions | 3 |
| Experience | 0 to 1 years | | |

**Job Description**

"Seeking motivated Research Project Interns to contribute to the development of a Glacier Lake Outburst Flood (GLOF) Warning System, funded by IUINDRR-NIDM, Govt. of India. This project focuses on deploying strong endurance drones integrated with communication technology for real-time monitoring in the Himalayan lakes. Roles and Responsibilities: * Assist in the design, development, and deployment of drone/UAV platforms equipped with communication modules. * AI/ML-based image processing techniques to analyze glacial lake conditions and detect potential flood risks."

**Functional Area**

Internship

**Essential Qualification**

Pursuing B.Tech (preferably in CSE core and Aerospace branch in current second and third year)

**Desired Qualification**

"1) Technical experience with drones, UAVs, remote sensing, or computer vision 2) Prior project or coursework involving coding and hardware integration 3) Experience in AI/ML-based image processing of glacial lakes"

**Required Skills**

"1. Minimum CGPA of 7.00 in completed semesters 2. Strong interest in field-integrated disaster management research 3. Essential skills: i) Practical knowledge of drone systems and autopilot technologies ii) Familiarity with LoRa-based long-range communication iii) Understanding of AI/ML-based image processing and methods for glacial lake detection and analysis"

**Salary Details**

Duration 3 Months, Stipend: Rs. 5000 for full duration per Intern
