To Whom It May Concern

I am happy to write a recommendation letter for Shashanka Shekhar Sharma. Shashanka interned with me from 24 May 2024 to 5 July 2024. He is an undergraduate student at SRM Institute of Science and Technology.

Shashanka explored various large language models for relation extraction and classification tasks. Initially, he focused on understanding the basics and explored using LLMs with the help of relevant APIs. He explored LLM models like Llama 3, Llama 2, phi3, GPT 3, and GPT 4-o. Apart from this, he also helped our research group in human verification of the newly created relation extraction dataset with a large number of relations. For this, he used the BRAT annotator tool. He continued this work even after his internship was over.

I was happy and satisfied with his progress over the short span of around two months. During the internship period, I found Shashanka to be a focused individual who tries to finish given tasks to the best of his capabilities. I was happy with his progress, work ethic and attitude.

I wish him all the best. If you have questions, please contact me.

Sincerely,

Ashish Anand, PhD
