OBJECTIVE

As a third-year B.Tech student and aspiring Software Engineer, I am passionate about applying computer science theory to practical challenges. My skills in software engineering are complemented by a strong interest in field-integrated disaster management research, with hands-on experience in AI/ML-based image processing for glacial lake detection. I am committed to leveraging these skills to contribute to impactful, cutting-edge technology.

EXPERIENCE

20/05/2025 – 03/07/2025

Research Intern

IIFON

As an intern at IIFON, I contributed to the development of the AIORI services portal from May to July 2025. My primary responsibilities included the integration of backend APIs with the front-end, as well as conducting research and analytics. During this time, I demonstrated a strong sense of ownership and commitment, successfully translating project requirements into functional solutions and gaining valuable hands-on experience in a professional development environment.

SELF DEVELOPED PROJECTS

- **Assisted in the application of AI/ML-based image processing** for glacial lake detection and analysis.
- **Developed an AI/ML-based system for automated crack detection.**
- **POSTURE GUARD**- Digital twin-based physiotherapy aid using MPU sensors for real-time arm movement tracking and interactive visual feedback during rehabilitation.
- **TREAT**-Gives the location of the nearest community hub via text SMS.
- An application for government funding has been submitted through the **YUKTI portal** to support the transition of the **POSTURE GUARD** project into a startup.
