EDUCATION

2024 - 2028
SRM UNIVERSITY

- BTech AEROSPACE ENGINEERING
  CGPA:- 8.60 (1st Year)

SKILLS

- UAV Systems Design & Integration
- Drone Piloting (4+ years)
- Mission Planner & QGroundControl
- Sensor Integration & Telemetry Systems
- Troubleshooting & Rapid Problem Solving
- Team Collaboration in R&D Environments

LANGUAGES

- English (Fluent)
- Hindi (Fluent)
- Spanish (Intermediate)

PROFILE

Enthusiastic and innovative UAV systems engineer with 4+ years of hands-on experience in designing, building, and piloting drones, including tricopters, quadcopters, and FPV platforms. Skilled in flight controller integration (Pixhawk 2.4.8), autonomous navigation systems, and mission planning using QGroundControl and Mission Planner. Proven track record in troubleshooting, electronics integration, and field testing for research and competition environments. Experienced in collaborating on R&D projects, including disaster management-focused autonomous drone systems and space science training under the India Space Academy. Passionate about applying technical expertise to real-world challenges in environmental monitoring and aerospace technologies.

WORK EXPERIENCE

Flight Systems Engineer, 2024 - 2025
Aerospace Systems Research Lab (ASRL),
SRM, Chennai

- Designed, built, and tested UAV platforms including tricopters, quadcopters, and FPV drones for research and competition purposes.
- Integrated Pixhawk 2.4.8 flight controllers with Mission Planner and QGroundControl for autonomous navigation.
- Executed rapid prototyping and on-field troubleshooting to maintain operational readiness.
- Collaborated with interdisciplinary R&D teams to optimize drone performance and mission reliability.

AVIONICS ENGINEER 2025 - present
Department of Electrical and Electronics Engineering

Apprenticeship: Electronics Lead – NIDAR Disaster Management Drone Project

- Designing and implementing electronics systems for two heavy-lift autonomous drones competing in NIDAR, a national-level disaster management competition in Delhi.
- Building and integrating wiring harnesses, power distribution networks, and sensor arrays for autonomous flight readiness.
- Configuring and calibrating onboard electronics to work seamlessly with autonomous control algorithms.
- Performing bench testing, troubleshooting, and on-site validation to ensure system reliability under demanding competition conditions.

PERSONAL PROJECTS

Designed and built multiple UAV platforms including tricopters, quadcopters, and FPV racing drones, handling every stage from frame fabrication to flight controller configuration and tuning. Developed Arduino-based systems such as an automatic writing machine and various sensor-driven automation projects, demonstrating expertise in electronics integration and rapid prototyping.
